Manager's comment

The fund remained flat in April with a return of 0.06%, performing in line with its benchmark. Year-to-date, the Global Flexible is 0.5% behind its benchmark, down 4.1%. Financial markets initially continued on their upward trend of the previous months. This trend was reversed after two weeks and progress made earlier were eventually erased. On the macroeconomic side, it was a month of no action from central bankers. The Fed did not hike rates further, the ECB did not lower interest rates and the bank of Japan maintained a statu quo. Most investors were yet betting on further monetary policy divergence in 2016. The current pause thus went against most anticipations and caused the USD to depreciate against the Euro, impacting investors and companies holding or selling assets in USD.

We also witnessed a strong resilience of the commodities rally in April, which also surprised many. It is still questionable whether this rally is sustainable in view of the lingering production surplus and the low global growth.

At the end of April, we further decreased the exposure of the fund to 60% as we feel the market is well valued and see decreasing investment opportunities.

Fund strategy

The Global Flexible Fund invests in equities, derivatives and fixed income securities. The style emphasizes a momentum approach as well as value cases. The net and gross exposures of the fund are flexible and adjusted monthly while using quantitative stock picking tools to identify the best portfolio constituents. The objective is to deliver high risk adjusted returns with a low volatility.

The Fund invests mainly in developed equity markets but can also invest in emerging markets.
