Manager's comment

In November we earned 5.7% underperforming our benchmark the Russell 2000 by 3.3%. This brings our return and alpha for 2023 to 2.6% and -1.1% respectively. The poor performance can largely be explained by the fact that during the third quarter only 72% of our firms met or beat earnings forecasts. Large earnings misses were reported by energy and telecommunications infrastructure companies reporting investment cancellations due to cost increases. In particular, Windfarm projects suffered from high interest rates and increases in start-up costs. Although many firms confirmed their confidence in their long term prospects by repurchasing shares, the fact is that markets are largely driven by short term results. This month 90 companies announced new buyback programs, the largest number since May 2022. We bought Clearfield and LFD and CEVA and sold MasTec.

Fund strategy

The PV Buyback USA Fund is a long-only fund focused on small and mid caps listed on the US equity market. It invests in companies announcing share buyback programs to take advantage of an undervalued stock price. To identify those firms where the repurchase is most likely motivated by undervaluation, the Fund has developed a systematic approach. Fund managers are highly experienced and have a strong track record in developing and implementing this investment strategy.
