Manager's comment

In November, we lost -1.0%, underperforming our benchmark, the Russell 2000, by -1.9%. This brings our return and alpha for the year to +0.9% and -12.1% respectively. Our risk measures beta (1.12) and volatility (24.3%) remain at similar levels to the benchmark. The underperformance cannot be attributed to company-specific earnings news as 82 % of our firms that reported Q3 earnings matched or beat earnings forecasts. Stock prices were mainly driven by market sentiment, which generated a roller coaster experience by a rather spectacular decline in tech stocks at the beginning of the month followed by a nearly equally spectacular recovery by the end of the month. Because of the government's shutdown reporting on some macro-statistics was delayed. Inflation remains at 3% and long-term interest rates have declined to 4%, suggesting that tariffs have so far not produced significantly higher inflation. Apparently, companies do not fully pass on the higher tariffs to consumers.

This month 78 companies announced buyback programs. We bought Soleno Therapeutics, Nianen and Globant and sold Mitek Systems, Kelya and Ceva.

Fund strategy

The PV Buyback USA Fund is a long-only fund focused on small and mid caps listed on the US equity market. It invests in companies announcing share buyback programs to take advantage of an undervalued stock price. To identify those firms where the repurchase is most likely motivated by undervaluation, the Fund has developed a systematic approach. Fund managers are highly experienced and have a strong track record in developing and implementing this investment strategy.
